

## Product Information

Organic and Nature™ Organic Fertilizer is a natural and organic product that is formulated to produce a beautiful lush lawn by stimulating lawn growth and enhancing plant growth. This is accomplished by revitalizing soil biology and improving plant health with safe natural soil microbes, plant growth hormones and organic nutrient sources. The product is environmentally friendly, non-toxic, biodegradable and safe for use around adults, children and animals.

The formula also reduces the amounts of pesticides needed to control insects.

The Fertilizer does not contain any chemicals, manure or animal byproducts.

## How It Works

Organic and Nature™ Organic Fertilizer is a proprietary blend of corn-gluten and beneficial soil microbes. The corn-gluten provides an organic source of slow-release nitrogen, phosphorous and potassium. The microbes improve soil biology and reestablish the optimal conditions to support healthy growth. Together, the corn-gluten and microbes help increase plant growth and stability.

The proteins found in corn-gluten and soy meal provide a natural and organic source of nitrogen, phosphorous, and potassium. Safe, naturally occurring soil microbes are added to the formula that slowly break down the proteins. This slow release action stimulates growth and helps establish lush lawns and strong plants.

## Usage Directions

Apply to lawn 3 times per year (spring, summer, fall). Using a spreader, apply 10lbs of fertilizer for every 1,000-sq. ft. of lawn area. Generally, this means that the spreader should be set at 50% open setting.

For best results apply 1 inch of water after product application. This should be followed by a 2 to 3 day dry period. Do not apply prior to excessive rains since this may reduce product effectiveness.

Do not seed 6 to 8 weeks after application of this product.

## Healthier Plants With No Toxins

Organic and Nature's Fertilizer is a natural and safe product that helps plants grow faster, healthier and stronger. Since it is made of natural ingredients it is safe for adults, children, pets, plants and the environment. Chemical-based products that are applied to outdoor plants can seep into groundwater as a result of rain, runoff, watering the area or soil absorption. By using natural ingredients this problem is eliminated. Chemical seepage into groundwater has possible links to a variety of health effects and environmental issues.

With Organic and Nature's Plant Booster you can promote healthy plants, a healthy environment and a healthy lifestyle.

## Benefits of Organic and Nature™ Fertilizer

- Effective formula that is easy to use.
- Stimulates plant growth. Revitalizes soil biology.
- Natural and organic. Non-toxic and biodegradable.
- Safe for use around adults, children and animals.
- Safe for plants and the environment.

## Safety Information

Individuals with allergies to natural plant proteins should avoid contact with this product

## Applications

- Schools and Universities
- Parks
- Gardens
- Office complexes
- Golf courses
- Lawns
- Greenhouses
- Farms

Chemical-Based Fertilizer	Organic and Nature Fertilizer
Contains harsh chemical	Natural biodegradable formula
Introduces chemicals and toxins	Non-toxic, all natural
May seep into groundwater	No effect on groundwater
Health risks associated with use	No health risks
Harmful to environment	Environmentally friendly
