

### Product Information

Organic and Nature™ Natural Herbicide is a fast acting formula for non-selective spot treatment of weeds and grass. It begins working within a few hours of treatment, increases soil microbial population and has no effect on soil pH. The herbicide is made from all natural food-grade ingredients and is safe for humans and animals. It attacks weeds and plants at the root without disrupting soil biology or harming the soil in any way.

The natural formula does not leave any harmful residue and does not pollute ground water making it the perfect environmentally-friendly herbicide.

The Natural Herbicide is used by certified organic growers, golf courses, schools, universities, facilities managers and municipalities.

Available in 32 ounce ready to use spray bottle, 1 gallon concentrate and 2.5 gallon concentrate.

### How It Works

The Natural Herbicide penetrates the soil and attacks the weeds, grass or plant at the root. The formula kills the plant without causing any residual harmful effects because the active ingredients are rapidly neutralized by contact with the soil. The herbicide will not change the soil pH and will not disrupt the soil since the ingredients are used as a food source by soil microorganisms.

### Usage Directions

Shake well before use. Spray directly on weeds or area that you wish to control and allow to dry. Rainfall occurring at least 30 minutes after application will not effect performance. This product is intended for non-selective spot treatment and will kill any weeds, grass or plants that it comes in contact with. Therefore, it is important to carefully identify the area to be treated and to carefully spray only the area to be treated.

For undesirable plants, spray directly on plant making sure that herbicide is sprayed on the base of the plant. Allow to dry. Reapplication may be required for older, hardier plants.

The fast-acting formula begins working within hours of application.

### Harmful Effects of Herbicides

Conventional herbicides contain chemical compounds that contribute to a variety of adverse effects. These toxic chemicals are carcinogens that have been linked to health problems such as lymphoma, genetic damage, reproductive effects and heart-related issues. Chemical compounds are breathed in during or after spraying and can also be absorbed through the skin as a result of direct contact. Access must be restricted to areas treated with chemical herbicides. Furthermore, toxic chemicals from herbicides may seep into groundwater as a result of rain, runoff, watering the area or soil absorption. These herbicides also kill beneficial soil microbes thus disrupting the normal condition of the soil.

Organic and Nature™ Natural Herbicide is completely natural, non-toxic and does not contain any harmful chemicals. It is safe for use and helps protect our environment and natural resources.

### Benefits of Organic and Nature™ Herbicide

- Non-Toxic & biodegradable
- No harmful residue. Does not harm soil pH.
- Increases soil microbial population
- Non-hazardous & non-caustic, non-flammable
- Safe for humans, pets, and the environment

### Safety Information

Organic and Nature™ Natural Herbicide is safe and natural, therefore it does not pose any threat to humans, animals or the environment. We recommend that all products be kept out of the reach of children and should not be ingested. Avoid contact with skin and eyes. If sprayed or splashed in eyes, hold eyelids open and rinse with a steady, gentle stream of water for at least 15 minutes. Contact with skin may cause irritation so wash with soap and water. While chemical-based herbicides are poisonous if swallowed, our Herbicide is not poisonous, however, we recommend contacting a doctor if ingested.

### Applications

- Schools and Universities
- Parks
- Gardens
- Patios
- Lawns
- Golf courses
- Greenhouses
- Farms
- Driveways
- Grasslands

Chemical-Based Herbicides	Organic and Nature Herbicide
Hazardous and Toxic	All natural, safe and non-toxic
Health risks associated with use	No health risks
Harmful to environment	Environmentally friendly
Works in 7 to 10 days	Works in hours
Reapplication after rain	Once dried rain has no effect
Storage & disposal requirements	Safe to store and dispose
Unsafe to enter area after application	Safe immediately after application
Possible liability linked to use	Eliminates liability
